

**CALIFORNIA STATE SCIENCE FAIR
2002 PROJECT SUMMARY**

Name(s) Corin H. Hamilton	Project Number 22147
Project Title Dangerous Dirt: Alleopathy of Eucalyptus Trees on Grass Seedlings	
Objectives/Goals To measure how alleopathy in a eucalyptus tree effects grass seeds. Methods/Materials I collected 5 soil samples from 1,2,3,4, and 5 feet away from a eucalyptus tree. I had my dad randomize the samples in 72 plastic pots so I was blinded. I used commercial potting soil as a control. Results Seeds planted in soil nearest the trunk did not grow as well. Abstract	
Summary Statement I measured alleopathy of eucalyptus trees on grass seeds.	
Help Received My dad did the blinding.
