Project Title	2
Are You Blinded by Color? Influence of Color on People's Choices	
Objectives/Goals Abstract	
My project was to determine if color influences people's choices in choosing ar	tem when given a
favorable color and another favorable trait. I believe that a person will choose a another favorable trait.	havorable color over
Methods/Materials	y
The materials I used in this experiment were food, fashion products, working to see color. Lasked the testers questions to find out what their favorite color was	ools, and people who can and another favorite trait of
a product. Then I presented them with two choices, neither of them had both the	e traits they liked.

I repeated this experiment on the same per	favorite color, I concluded
accurate result.	copic so i could get a more
Results Color influenced 820% of the mounts I tosted. This result is year size in all the	a mandy ata I tagtad Calan
Color influenced 83% of the people I tested. This result is very similar in all the products I tested. Color seemed to influence kids of the ages 2-5 more than any other age group I tested. As the ages increased, the influence of the color degreesed. This happened is both people age.	
influence of the color decreased. This happened if both senders	
Conclusions/Discussion My conclusion is that color influences children more than addits. When children were given two choices	
one with a color they liked and another with another trait they liked, then they most likely picked their	
My conclusion is that color influences children more than adults. When children were given two choices-one with a color they liked and another with another trait they liked, then they most likely picked their favorite color. Adults didn't seem to be influenced by color of the products I tested. This data suggests that companies that make products for little kids should make color the highlight of their product, and at the same time little kids should be taught to like a product for it's features, not just for it's color.	
same time little kids should be aught to like a product for it's features, not just for it's color.	
Summary Statement	
My project was to find out if people's choices are influenced by their favorite contrait when choosing an item.	olor over another favorable
trait when cheosing an item.
