Roy Goldstein

**Project Title**
Does Size and Mass Matter?

**Abstract**
The objective was to find out if size and mass affect the growth of a bean's plant.

**Methods/Materials**
Various sized lima beans were placed into different categories defined by size and mass. These lima beans were placed in different vases and watered daily. Observations were recorded in a journal.

Lima beans, vases, sunshine, electric light, water, soil.

**Results**
The small sized bean did not grow at all. The medium sized beans' plants came in first place and the large beans' plants came in second place.

**Conclusions/Discussion**
If a lima bean is too small then no plant will grow from it. A lima bean must be a certain size for a plant to come from that bean.

**Summary Statement**
My project involves lima beans and how size and mass could affect a bean's plant's growth.

**Help Received**
My Dad helped correct my grammar and helped me type my topic information into Word. My mother helped me water my plants and helped me glue my material to my board.
