

## CALIFORNIA STATE SCIENCE FAIR 2008 PROJECT SUMMARY

Name(s)	Project Number
Devon T. Gearhart	J2006
Project Title Captive Lizard Observation	
Abstract	
<ul> <li>Objectives/Goals         The main reason I did this experiment was because I wanted to see how the n the Crested Gecko and the diurnal Bearded Dragon act at different times of th Methods/Materials         My pet lizards of different species; The Leopard Gecko (Eublepharis macular (Rharodactylus cilatus) and the Bearded Dragon (Pogano viticeps). I plan to times of the day to determine behavioral patterns and activities of my lizards.     </li> <li>Results         What I learned from my observational experiment was the unpredicted activit example the nocturnal lizards exibited a good amount of activity during the d exibited nearly no activity during the night, but was alert and active most all tresults of their specific activities have been summarized graphically in my dis behaviors/Discussion     </li> <li>My lizard observational study revealed many unique activities and behaviors casual lizard pet owner did not observe. What I was able to witness during m however really opened my eyes to what their behavior may be like in their na I also became aware of how their behavior and activities have become modified My results are represented both graaphically and in narrative in my completed with results are represented both graaphically and in narrative in my completed My results are represented both graaphically and in narrative in my completed My results are represented both graaphically and in narrative in my completed My results are represented both graaphically and in narrative in my completed My results are represented both graaphically and in narrative in my completed My results are represented both graaphically and in narrative in my completed My results are represented both graaphically and in narrative in my completed My results are represented both graaphically and in narrative in the completed My project is about the behaviors and activities of different species of lizards     </li> </ul>	he day. Fius), The Crested Gecko observe them at regular fies of the lizards; for ay. The diurnal lizard the time during the day. My splay. The activities and tted times. in my lizards, that I, as the by observational study tural habitat and conditions. ed due to captive conditions d study results.
Help Received I would like to thank my Mom for holping magnet the materials. I would like	to thank my Dad for

I would like to thank my Mom for helping me get the materials. I would like to thank my Dad for helping out with the handling of the lizards, providing knowledge about the lizards, and for taking me to get supplies for my lizards.
