

CALIFORNIA STATE SCIENCE FAIR 2011 PROJECT SUMMARY

Name(s)	Project Number
Daniel Reyes	
	31123
Project Title	
Maximizing DNA Isolation	
Abstract	
Objectives/Goals	S
The objective of my project is to determine a formula and procedure to variation of enzymes, sodium chloride and alcohol concentrations.	maximize the solation of DNA by
Methods/Materials	\sim
DNA was extracted from strawberries using a typical formula and ther conducted in which different concentrations of enzymes, sodium chlor and measured in order to derive the formula which would maximize the	a process of iteration was ide and alcohol where evaluated
and measured in order to derive the formula which would maximize the	e isolation of DNA.
Results	$\mathbf{N7}$
After testing five unique variations, my final results showed that by ch	ang) is the amount of enzymes
from 1gr to 0.125gr and using 91% concentrated alcohol I was able to My isolated DNA increased from 30% visibility using the typical form	maximize the isolation of DNA.
developed formula.	and to oo /o visionity during my
Conclusions/Discussion	
One of the most important steps in my project was the measurement of	DNA. I initially measured DNA
visibility using naked eye and normal light. In order to increase the acc my own Spectrophotometer which gave me a more accurate image of i measure DNA visibility more accurately and was able to confirm the re	curacy of my measurements I built
measure DNA visibility more accurately and value to confirm the r	esults of my formula

Summary Statement	
My project successfully developed a procedure and formula for Maxin	nizing the Isolation of DNA by
studying the variation of enzymes, sodium chloride and alcohol concer	inations.
Help Received	
Mother helped type report and keep journal up to date; Dad helped cut	
Spectrophotometer; My uncle Genaro Hernandez gave me friendly adv	vise on how could I measure my
extracted DNA.
