| Project Title | 6 |
| The Effect of Mint on Water Temperature | |
| | |
| Abstract | |
| Objectives/Goals | |
| The purpose of my experiment is to find out if mints cause a temperature decre fresh, cooling sensation that you feel in your mouth was due in part to a reduction | on in temperature. |
| Methods/Materials | |
| I used hot tap water starting at 93.3 °C (200°F) and measured the temperature be mints for a set time period. Using three glasses of hot water, I left one alone (continue) | etere and after adding my |
| Mentos in the second glass and two Icebreakers in the third glass. | ntror group), put one |
| Results My results showed that the Mentos cooled the water temperature more than the | Icehreakers |
| Conclusions/Discussion | |
| My hypothesis was supported by the data because the results showed a temperar mints. If I did this project again I would like to test a greater variety of mints, s | ture reduction for both |
| Tacs to see if this trend continues. | uch as Anoids and Tic |
