Project Title	
How Introducing Foreign Objects Affects Horse Behavior	
	\sim
Objectives/Goals Abstract	
My objective was to see how horses would react to different objects and to find	the "Horseanality" of each
horse according to the Parelli "Horseanality" type.	
Methods/Materials I took three objects, a pool noodle, plastic bag, and a Parelli horse tall, and bro	what it up to each horse 3
times. Then I noted how severe their reaction was and used their results to com	nare what "Horseanality"
they have with the Parelli "Horseanality" chart.	· ·
Results	nted to har and therefore is
I found that Priscilla was not alarmed or playful with any of the objects I prese a left brain introvert. Moose was curious with the objects I presented to brin, an	nd is therefore a left brain
extravert. Lastly, Crow had extreme reactions to the objects presented to him, brain introvert. I found that the Parelli "Horseanality" ppes accurately represented	, and therefore is a right
brain introvert. I found that the Parelli "Horseanality" types accurately represent	nted the personalities of my
horses. Conclusions/Discussion	
My results matched my hypothesis. This helps have people to see what "Horse	eanality" their horse has and
My results matched my hypothesis. This helps house people to see what "Horse helps them have a better relationship with their horse. For example, with this in	sight they can have an idea
on how to best play with their horse what methods will be coming to their hor	se in stressful situations,
and what motivates their horse.	
\sim \checkmark	
Summary Statement	
In this experiment I found that each horse had its own "Horseanality" by obser- different objects.	ving their reaction to
different objects.	
Help Received	
My science teacher instructed me on the requirements to have a successful pro	
and showed me how to create graphs on the computer. I also may email Parelli more information regarding their "Horseanality" research.	Natural Horsemanship on
more mormation regarding them morseananty research.
