| Project Title | |
| The Effect of Natural vs. Synthetic Insecticides on the Mortality Rate | |
| Cockroaches | |
| | |
| Objectives/Goals Abstract | $(\sum_{i=1}^{n} $ |
| The objective of this study is to test natural and synthetic insecticides on Methods/Materials | the montality rate of cockroaches. |
| Used neem oil (2.5 mL) neem extract (2.5 mL) vinegar (2.5 mL) loops (5 mL) cockroaches 3 | |
| droppers, measuring teaspoon (2.5 mL), and 12 jars (8cm by 5cm). The | dropper was used to get a |
| droppers, measuring teaspoon (2.5 mL), and 12 jars (8cm by 5cm) The measured 2.5mL of neem oil and put into the measuring teaspoor. Then One cockroach was put in each jar. On a separate jar with no insecticide | a cockroach was put. |
| Results | $\mathbf{X7}$ |
| Several trials were run with the same method. Out of all instructions, new most effective, followed by neem extract (0.09 hr.), vinegar (0.09 hr.), and | en oil (0.05 hr.) was found to be |
| Conclusions/Discussion | |
| The goal of this experiment was to test the effect of different types of na the mortality rate of cockroaches. In the future, different dosages of neer | n oil and neem extract will be |
| tested to find the minimum amount required to kill cockreaches without any harmful effects on other | |
| beneficial insects and pets. | |

| Summary Statement | |
| I used natural and synthetic insecticides to test the mortality rate of cockroaches. | |
| | |
| Help Received | |
| My teacher gave me the idea of using neem oil and neem extract. Overall I did the project by myself. | |
